About Magen Daniel Systems LLP

India-registered technology company | Bengaluru, Karnataka

- Founded with a vision to revolutionize vehicle safety through connected technology
- Specializing in embedded systems, IoT, and intelligent mobility solutions
- Expert team with deep experience in firmware, hardware-software integration, and real-time systems
- Focused on building safety-first products for vehicles, fleets, and smart transportation
- Committed to innovation, quality, and scalable technology solutions

Our Services

YOUR
LOGO

Firmware Design

- Custom firmware development for microcontrollers and embedded processors
- Low-level driver development and hardware abstraction layers
- Real-time operating system (RTOS) integration

IoT Solutions

- End-to-end IoT system architecture
- Sensor integration and data acquisition
- Cloud connectivity and remote monitoring

Embedded System Development

- Complete embedded product development lifecycle
- Hardware-software co-design
- System optimization and performance tuning

Prototyping

- Rapid hardware and software prototyping
- Proof-of-concept development
- Design validation and testing

Our Projects

MAGEN DANIEL SYSTEMS LLP

Build a scalable vehicle safety intelligence layer that helps detect risk, warn drivers, and prepare for V2V/V2X mobility.

V2X Safety Device

Key features: Road hazard awareness, SOS & emergency workflows, accident/rollover support, mobile app interaction, backend/cloud connectivity, and future V2V/V2X communication.

What the Product Supports

YOUR
LOGO

Road Hazard Awareness

Awareness of road hazards, risky areas, and safety events that may affect drivers.

Accident Event Support

Safety event awareness and reporting workflows for vehicles and fleets.

SOS & Emergency Workflows

Emergency trigger workflows, alert handling, and structured response planning depending on the active package.

Who We Serve

Customers & Partners

- Private vehicle owners
- Commercial operators
- Logistics fleets
- Passenger transport
- Government pilots

Deployment Environments

- Urban traffic & Highways
- Fleet routes & Logistics
- Industrial areas
- Remote & Rural routes
- Accident-prone roads

Package Options

Basic Device Package

Essential safety features, basic alert support, mobile app interaction, and standard configuration.

Advanced Safety Package

Enhanced alert logic, expanded configuration, and backend connectivity where applicable.

Fleet / Company Package

Multi-vehicle setup, admin access, vehicle registration, reporting, backend support, and onboarding.

Full-Service / Pilot

Device supply, configuration, installation coordination, software activation, updates, and monitoring.

Why Choose Us

YOUR
LOGO

Innovation-Driven Approach

Cutting-edge technology in connected vehicle safety. Continuous R&D for next-gen V2X and V2V solutions.

Safety-First Philosophy

Every product designed with driver and road safety at the core. Real-time hazard detection and emergency response capabilities.

End-to-End Expertise

From firmware to cloud — complete embedded and IoT capabilities. In-house team with deep domain knowledge.

Scalable & Flexible Solutions

Modular packages for individuals, fleets, and enterprises. Easy integration with existing vehicle systems.
